TO LESSEN CRIME IN CHILDREN THROUGH MEDICAL CARE

The Work of Dr. M. G. Schlapp of Cornell University Medical School Among the Feeble Minded and Unfortunate Young in New York.

T o save thousands of children to society, by taking them when they are young and rectifying the evils and misfortunes that are primarily responsible for their shortcomings, is the problem that the society for the Prevention of Cruelty to Children in this city is about to undertake. For several months past, the preliminary work that will make this work possible has been quietly going on, and now for the first time the work has progressed far enough to justify the society in taking the public into its confidence and to a certain extent letting the public know what the object of this work is, and how it is possible to accomplish the results in which the society is interested.

In the Public Schools of New York there are said to be as many as 5000 feeble-minded children, who deserve to be and should be kept out of our mental and moral status, the loss of which on the part of our children can never be remedied. Due to the nature of the disease, this work has been able to proceed with a certain amount of success.

Dr. M. G. Schlapp of the Cornell University Medical School has been working to help these children and has already been successful in the treatment of several hundred, whose mental or physical conditions have caused them to be kept out of the schools. In addition, he has begun to make visits to the homes of these children and has been able to do much good by his visits. Dr. Schlapp has been in New York for the last two months, having spent three weeks in New York City and two weeks in the country.

As a result of all these investigations he has found that there are at least 5000 children in New York City who could be made useful to the community if proper treatment were given them. This news has been made known to the society, and plans have been made for the future.

One of the Patients.

The existence of these conditions in modern New York is due to the fact that the disease is not confined to children, but extends to both adults and children. The existence of feeble-mindedness in any individual is due to the fact that the conditions are not confined to children, but extend to both adults and children. The existence of feeble-mindedness in any individual is due to the fact that the conditions are not confined to children, but extend to both adults and children. The first class of children whose nervous system is perfectly normal but whose physical or mental condition is somewhat abnormal and who need medical treatment, is the class of children whose nervous system is perfectly normal but whose physical or mental condition is somewhat abnormal and who need medical treatment. The second class, and by far the more important, is that of the children who are born mentally or physically imperfect, and who need medical treatment. The third class, and by far the more important, is that of the children who are born mentally or physically imperfect, and who need medical treatment.

Dr. Schlapp and his assistants have been working on these children for two years, and have made great progress in their treatment. The society is now able to afford medical treatment to all children who need it. The society is now able to afford medical treatment to all children who need it.

Taking Records of a Child.

The society has been taking records of children's records for the last two years. These records consist of a description of the child, his physical and mental condition, his home life, and his school life. The society is now able to afford medical treatment to all children who need it.

In addition, the society is now able to afford medical treatment to all children who need it.
