THE NEW WRIGHT FIVE-PASSENGER BIPLANE FOR CROSS-COUNTRY FLIGHTS.

The latest type of a flying machine, which has been developed by the Wright brothers, is the five-passenger biplane that has just been tested in gliding flights. This machine has a number of features that make it more suitable for passenger travel than any other type of airplane that has been constructed. The Wright brothers have been working on this design for several years, and they have now produced a machine that is both efficient and reliable.
