"OLYMPIC," WORLD'S BIGGEST SHIP, HUGE FLOATING HOTEL

Exceeds Next Largest Steamer by 13,000 Tons--If Two Ships of Her Size Were Placed Across the East River They Would Have 200 Feet of Hull on Land.

will be the largest single vessel in naval history, measuring 910 feet in length, 82 feet in beam, and 80 feet in depth. When in full service, she will have a tonnage of 146,000 tons, or about twice that of the French vessels. The Olympic will be the first vessel to be equipped with the latest in marine engineering, including the latest in steering, navigation, and communication equipment. She will have a displacement of 146,000 tons, and a speed of 20 knots. The Olympic will be the first vessel to be equipped with the latest in marine engineering, including the latest in steering, navigation, and communication equipment. She will have a displacement of 146,000 tons, and a speed of 20 knots.
