Dr. Dudley A. Sargent of Harvard Denies that She Is Getting Masculine, But She Is Getting More Sensible.

Annette Kellermann
Who, According to Dr. Sargent, Is Nearest to a Perfectly Proportioned Woman of the 10,000 Examined.

Dr. Dudley Allen Sargent, Director, Harvard Gymnastics.

Rose Pittomoff, Champion Long Distance Swimmer, Whose Remarkable Physical Characteristics Were Specially Studied by Dr. Sargent.

Rose Pittomoff, Champion Long Distance Swimmer, Whose Remarkable Physical Characteristics Were Specially Studied by Dr. Sargent.

Miss Dorothea Scann, One of the Best Known Athletic Women.

women are narrower in the hip than in the waist, whereas men are broadest at the waist and narrowest at the hips. Dr. Sargent says that the proportion of women has changed in three respects. It is a matter of the lower part of the body, of the thighs and the buttocks, that has changed; in the upper part, the proportions of men and women are the same. Women have broader shoulders than they used to have, and this is partly due to the fact that they are strong enough to carry heavy weights.

Dr. Sargent says that the proportions of the body have changed in the past few years, and that women are now more like men in their physical development. Women are now more muscular than they used to be, and this is partly due to the fact that they are more interested in physical exercise and sports.

The average woman's bust is 35 inches, and the average man's bust is 38 inches. The average woman's waist is 27 inches, and the average man's waist is 28 inches. The average woman's hips are 35 inches, and the average man's hips are 36 inches.

The average woman's height is 5 feet 4 inches, and the average man's height is 5 feet 10 inches. Women are now taller than they used to be, and this is partly due to the fact that they are more interested in physical exercise and sports.

The average woman's weight is 130 pounds, and the average man's weight is 150 pounds. Women are now heavier than they used to be, and this is partly due to the fact that they are more interested in physical exercise and sports.

When women were young, their bodies were more flexible than they are now. Women are now more rigid than they used to be, and this is partly due to the fact that they are more interested in physical exercise and sports.

Women are now more muscular than they used to be, and this is partly due to the fact that they are more interested in physical exercise and sports. Women are now more athletic than they used to be, and this is partly due to the fact that they are more interested in physical exercise and sports.

Women are now more intelligent than they used to be, and this is partly due to the fact that they are more interested in physical exercise and sports. Women are now more capable than they used to be, and this is partly due to the fact that they are more interested in physical exercise and sports.

Women are now more capable than they used to be, and this is partly due to the fact that they are more interested in physical exercise and sports. Women are now more capable than they used to be, and this is partly due to the fact that they are more interested in physical exercise and sports.
