Queries from the Curious and Answers to Them.

A further inquiry concerning the process of wood-boring. (Continued.)

The process of wood-boring is a fascinating one, and one that has been studied by scientists for many years. It involves the use of a tiny worm-like creature known as a wood-boring beetle, which bores through the wood and leaves behind a trail of tunnels.

There are several different types of wood-boring beetles, each with its own unique characteristics. Some are able to bore through hard woods, while others are better suited to softer woods. The beetles are attracted to wood that is already infested with pests or that has been damaged by exposure to the elements.

To prevent wood-boring damage, it is important to keep your wood in good condition and to regularly inspect it for signs of infestation. If you suspect that your wood is infested, it is best to consult a professional who can recommend the best course of action.

A. W. Gorham, in his book "The Manual of Entomology," provides a detailed description of the life cycle of the wood-boring beetle. He notes that the beetle spends much of its life underground, where it is protected from predators. The adult beetle emerges from the ground in the spring, and begins to lay its eggs in the wood.

The eggs hatch into larvae, which begin to bore through the wood. The larvae continue to grow and feed, eventually transforming into adults. The adult beetles then mate and the cycle begins anew.

Another use for wireless. (Continued.)

The use of wireless for military purposes has been an area of interest for many years. The first military application of wireless was during World War I, when it was used to communicate between ships and submarines.

Since then, wireless technology has continued to evolve, and it is now used in a wide range of military applications. For example, it is used to communicate between soldiers on the battlefield, and to relay information from sensors and other devices.

One of the most advanced uses of wireless technology in the military is in the field of cyber warfare. Wireless technology allows for the rapid and secure transmission of data, which can be used to support a wide range of military operations.

However, wireless technology is not without its challenges. It is vulnerable to interference, and is subject to interception by enemy forces. As a result, military organizations must take steps to ensure the security of their wireless communications.

It is important to note that the use of wireless technology in the military is not limited to communication. Wireless technology is also used for a wide range of other purposes, including navigation, positioning, and control.
Queries from the Curious and Answers to Them.

This department does not pretend to be all-inclusive; however, to answer questions to the best of our ability on the points that are sent in, we do our utmost to give all that are thrilling, or of general interest.

To receive attention, every query must be accompanied, if possible, with a remittance of $1.00, to cover the cost of sending it. This does not necessarily mean that the question will be answered, but it will be used if the question is general enough to be of interest to a large number of people.

Letters directing answers to particular persons are not answered unless accompanied by a dollar remittance. All queries that are not accompanied by a remittance are used if of general interest.

Before answering queries, the writers are requested to keep the following four principles in mind:

1. All communications should be short and to the point.
2. All questions should be accompanied by a dollar remittance.
3. All queries should be directed to the Curious and to the Answers.
4. All letters should be accompanied by a dollar remittance.

It is impossible to give a clear and precise answer to the question of what is the best way to get a job. The best way to get a job is to work hard, to be honest, to be reliable, and to be willing to learn.

The answer to the question of what is the best way to get a job is to work hard, to be honest, to be reliable, and to be willing to learn.

The question of what is the best way to get a job is to work hard, to be honest, to be reliable, and to be willing to learn.

The question of what is the best way to get a job is to work hard, to be honest, to be reliable, and to be willing to learn.

The question of what is the best way to get a job is to work hard, to be honest, to be reliable, and to be willing to learn.

The question of what is the best way to get a job is to work hard, to be honest, to be reliable, and to be willing to learn.

Queries from the Curious and Answers to Them.

PINEAPPLES.

Editor's Note: The following is a reply to a communication from a subscriber who inquired about the method of preserving young pineapples for use in winter.

The best way to preserve young pineapples is by placing them in a cool, dry place and allowing them to ripen slowly. They should be checked periodically to ensure they are not becoming mushy or spoiled. Once fully ripe, they can be stored in a refrigerator or freezer.

HARRIET T. J.

The New York Times

Pineapple Preserves.

Editor's Note: The following is a reply to a communication from a subscriber who inquired about the best way to make pineapple preserves.

To make pineapple preserves, peel the fruits and cut them into pieces. Combine the pineapple pieces with sugar and juice from one lemon. Boil gently for about 30 minutes, stirring occasionally, until the mixture thickens. Pour into sterilized jars and seal. This mixture can be stored in the refrigerator for several months.

GEORGE H. W.

The New York Times

Long Distance Telegrams.

Editor's Note: The following is a reply to a communication from a subscriber who inquired about the best way to send a long distance telegram.

To send a long distance telegram, use the services of a telegraph company. The cost is usually charged by the word, with a difference between daytime and night-time rates.

L. J. S.

The New York Times

Wine and Beer.

Editor's Note: The following is a reply to a communication from a subscriber who inquired about the best way to store wine and beer.

Wine and beer should be stored in a cool, dark place. Wine should be stored on its side to keep the cork moist, while beer can be stored on its side or on its side, depending on the type of beer.

M. R.

The New York Times

Flowers.

Editor's Note: The following is a reply to a communication from a subscriber who inquired about the best way to keep flowers fresh.

To keep flowers fresh, use water with a small amount of sugar and a pinch of salt. Change the water and replace it with fresh water every few days. Change the orientation of the stems and replace them in water if they become limp.

Miscellaneous.

Editor's Note: The following is a reply to a communication from a subscriber who inquired about the best way to handle a variety of miscellaneous questions.

For miscellaneous questions, please consult the following resources: The New York Times, a local newspaper, or a local library. You may also wish to contact a professional or expert in the field of your interest for advice.
Queries from the Curious and Answers to Them

IN THIS DEPARTMENT THE TIMES will endeavor to answer queries of the curious regarding subjects which our readers are unable to settle for themselves. Queries, to receive attention, must be signed with the full name and address of the questioner. This is not necessary for publication, and the only initials will be used if the questioner so desires. No attention will be paid to questions not bearing name and address. No answers will be made personally through the mail, and answers will be published in this column as soon after receipt of the questions as possible.

CONSTANT READER—Please publish the facts we have had in New York City since Decoration Day.

The local office of the Weather Bureau informs us that during the month of June rain fell on seven days, and from July 1 to 15 inclusive on five days. On most of the days on which rain fell the amount amounted to no more than a sprinkling.

GILES O'KEEFE—Can you give any information regarding a bill introduced at Albany, regarding salting loaning, making, and advancing money to any person wholly or partly in anticipation of salary or compensation not earned at the time such loan or advance is made, who shall exact, charge, or receive from such person as a consideration for such loan or advance, directly or indirectly, either as bonus, interest, or otherwise, or under the guise of a charge for incurring the status of the person incurring for such loan or advance, or for furnishing the necessary papers, or for any other service in connection with such loan or advance, a greater sum than at the rate of 2 per cent per month on the amount so loaned or advanced from the time such loan is made until the payment thereof shall be guilty of a misdemeanor.

The bill died in committee, therefore its provisions are nil.

DAILY READER—What was the full name of Bishop Newman? I think it was the Bishop of the Episcopal Church in Philadelphia. Do you think it was afterward a Catholic? Was Christian Louis Newman any relation?

We have been unable to find any authentic information concerning an Episcopalian Bishop of that name. We have found that there was a Metropolitan Episcopal Bishop of that name. Although he did not become a Catholic, he was ordained a priest in the Episcopal Church. John Henry Newman was born in New York City in 1801 and died in London in 1890. He was a founder of the Oxford Movement and an influential figure in the development of American episcopalianism.

J. P. COLE—When was the obelisk in Central Park brought to New York, and on whose orders? What is the significance of an obelisk?

The obelisk was an Egyptian work delivered to the sun god, and was therefore most numerous at Heliopolis, from which the obelisk is derived. As every Egyptian god was more or less identified with another, the obelisk became a symbol of the god. The obelisk was one of two called Cleopatra's Needle erected by the Thoth, the Greek god of wisdom. They were transferred to Alexandria in Ptolemaic times. One was taken to Spain by order of the French Empress. The other was brought to England and placed at the base of the Eiffel Tower. It stands on a great, curving granite pedestal and is supported by four gigantic bronze cranes, by the Oriental fashion. The hieroglyphics which cover it refer to events of the sixteenth and fourteenth centuries before Christ.

RICHARD MACKENZIE—Please tell me all you can about the battles of Solférino and Badoglio.

The battle of Solferino, which is in Lombardy, was fought June 24, 1859, between the allied French and Sardinian armies under their respective sovereigns and the Austrian emperor. The Austrian emperor was present. The Austrian after its defeat at Magenta gradually retreated across the Mincio and took up a position in the celebrated quadrilateral and were expected there to await the attack. But the advance of Garibaldi on one side and Napoleon on the other induced them to try to prevent the Magenta offensive on June 23. The conflict began early on the 24th and lasted five to fifteen hours. At first the Austrians had the advantage, but the superior artillery of the French on Cavriana and Soissons changed the fortune of the day, and the Austrians after fighting desperately, were compelled to withdraw. The victory was by the rifled cannon of their adversaries. The Austrians lost 292 officers and 10,000 soldiers; of the allies 8,000 killed and 12,300 soldiers killed and wounded. This battle closed the war. Preparations for peace were signed at Villa Franca July 12.

The battle of Badoglio was fought near Koniggratz in Bohemia between the Austrians commanded by Marshal Benedikt and the Prussians commanded by King William I. July 3, 1866.

Prince Frederick Charles halted at Kammen on May 13, 1866, and his army encamped his march at midnight, and the first line of battle on the way back. The Austrians were engaged at about 8 o'clock, and a desperate struggle followed. The Prussians were not in the last hour of the day. The Austrians at first, however, became a disaster. So that the Prussians, the Austrians were said to have destroyed kilometer and wounded, and 70,000 prisoners. The Prussians lost their victory gave the supremacy in Germany to Prussia, and the Congress of Berlin established the independence of Belgium. If you desire more full reports of each movement and most of the men by any public library.

JOHN MAYER—When was the obelisk in Central Park brought to New York, and on whose orders? What is the significance of an obelisk?

The obelisk was an Egyptian work dedicated to the sun god, and was therefore most numerous at Heliopolis, from which the obelisk is derived. As every Egyptian god was more or less identified with another, the obelisk became a symbol of the god. The obelisk was one of two called Cleopatra's Needle erected by the Thoth, the Greek god of wisdom. They were transferred to Alexandria in Ptolemaic times. One was taken to Spain by order of the French Empress. The other was brought to England and placed at the base of the Eiffel Tower. It stands on a great, curving granite pedestal and is supported by four gigantic bronze cranes, by the Oriental fashion. The hieroglyphics which cover it refer to events of the sixteenth and fourteenth centuries before Christ.

M. H. FLITE—From Oregon, Charles W. Upham, from Utah, Reed Smoot and George Burchard, from Wyoming, Clarence D. Clark and Francis E. Warren, and from North Dakota, H. C. Hardshrap and J. C. Couter, New Mexico, E. A. and Territory, Congress, William H. Andrews.

MAY K. MLVLIN—Which is correct: "Two teaspoonsful is the same as one tablespoonful" or "Two teaspoons are the same as one tablespoonful"? Being the subject of the sentence and being plural, takes a plural verb.

The Liberty Bell was cast in London in 1753, with the message on it, "Proclaim liberty throughout the land unto all the inhabitants thereof." Later it was re-cast, owing to a flaw, in Philadelphia, still with the same message, and was hung in the belfry of the State House about 1752. The title we should think was restated in the State of Pennsylvania. It was near 1853. It got its title from the legend that when the Declaration of Independence was signed in Independence Hall the bell was rung. Recently three bell-founders have sought to discredit this legend.

JAMES A. AYDEN—What is the size of the Liberty Bell? Is it the present owner, and how did they acquire title?

The Liberty Bell was cast in London in 1753, with the message on it, "Proclaim liberty throughout the land unto all the inhabitants thereof." Later it was re-cast, owing to a flaw, in Philadelphia, still with the same message, and was hung in the belfry of the State House about 1752. The title we should think was restated in the State of Pennsylvania. It was near 1853. It got its title from the legend that when the Declaration of Independence was signed in Independence Hall the bell was rung. Recently three bell-founders have sought to discredit this legend.

In the year 1847, when the Liberty Bell was brought from New York, bought stamps and forwarded them to Philadelphia, in the making of paper pach. Paper mache manufacturers would certainly not need them as raw material.

ROSE STRAUS—Is the plural of money "monies" or "moneys," or is either correct? "Monies" is erroneous. The plural of money is sometimes used.

O. N. TROVIEIN—Please give me the names of the United States Senators from Colorado, California, Washington, Oregon, Utah, Wyoming, North Dakota, and New Mexico.
