Commissioner Edwards Tells How Modern Invention Is Pressed Into Service in This Important Branch of a City's Affairs.

By William H. Edwards.

Commissioner of Street Cleaning of New York.

The problem of cleaning the streets of the Borough of Manhattan, the Bronx, and Brooklyn is certainly one of the most difficult in the world, and it is one that is not subject to easy solution. The amount of dirt and grime that accumulates on the streets during the course of a day is enormous, and it is impossible to keep them clean by any method that is not laborious and expensive. The problem is further complicated by the fact that the streets are not only narrow but also steep, and it is impossible to use machinery that is not specially designed for the purpose.

The solution of this problem has been found in the use of modern cleaning machines and methods. The Commissioner of Street Cleaning of New York, Mr. J. H. Edwards, has been using these machines and methods for several years, and he has found them to be very effective. The machines are designed to remove the dirt from the streets by suction, and they are operated by men who are trained in the use of them.

The method consists of using a machine called a "flashing machine," which is a large machine that is pulled by a team of horses. The machine is equipped with a large drum that is loaded with a mixture of water and peat moss. As the machine moves along the street, the drum is turned, and the peat moss and water are sprayed on the street. The peat moss sticks to the dirt, and the water helps to loosen it. The dirt is then removed by a team of horses, who pull a machine called a "dredge," which is designed to dig the dirt out of the street.

The method is simple and effective, and it is also economical. The cost of operation is low, and the machines can be used at any time of the day or night. The dirt is removed from the streets without any disturbance to the traffic, and the streets are left clean and dry.

The Commissioner of Street Cleaning has found that this method is very effective, and he has now decided to use it in all the streets of the Borough of Manhattan, the Bronx, and Brooklyn. The method is now being used in all the streets of Manhattan, and it is being used in the streets of the other two boroughs as well.
